

Cara menjalankan aplikasi

Note : Belum selesai, Cuma baru desain tampilan.

1. Download terlebih dahulu filenya
2. Jika sudah silahkan pindah kan filenya ke htdoc.
3. Buat database pada xampp kalian dengan nama db_bus, kemudian import database yang terletak pada foldel yang barusan di download trs dalam folder db.
4. Jika sudah maka lakukan konfigurasi pada framework codeigniternya
5. Pertama konfigurasi database nya yang terletak pada qatros/application/config/database.php

```
1 <?php
2 defined('BASEPATH') OR exit('No direct script access allowed');
3
4 $active_group = 'default';
5 $query_builder = TRUE;
6
7 $db['default'] = array(
8     'dsn' => '',
9     'hostname' => 'localhost',
10    'username' => 'root',
11    'password' => '',
12    'database' => 'db_bus',
13    'dbdriver' => 'mysqli',
14    'dbprefix' => '',
15    'pconnect' => FALSE,
16    'db_debug' => (ENVIRONMENT !== 'production'),
17    'cache_on' => FALSE,
18    'cachedir' => '',
19    'char_set' => 'utf8',
20    'dbcollat' => 'utf8_general_ci',
21    'swap_pre' => '',
22    'encrypt' => FALSE,
23    'compress' => FALSE,
24    'stricton' => FALSE,
25    'failover' => array(),
26    'save_queries' => TRUE
27 );
28
```

6. Lalu konfigurasi file pada qatros/application/config/config.php

```
13
14 WARNING! You MUST set this value!
15
16 If it is not set, then CodeIgniter will try guess the protocol and path
17 your installation, but due to security concerns the hostname will be set
18 to '$_SERVER['HTTP_HOST']' if available, or localhost otherwise.
19 The auto-detection mechanism exists only for convenience during
20 development and MUST NOT be used in production!
21
22 If you need to allow multiple domains, remember that this file is still
23 a PHP script and you can easily do that on your own.
24
25
26 $config['base_url'] = 'http://localhost/qatros/';
27
28
```

Di isi dengan 'http://localhost/nama_foldernya/'

7. Jika sudah aplikasi bias dijalankan dengan mengetikkan url http://localhost/nama_folder/ pada browser anda.
- Login admin : http://localhost/nama_folder/

Tampilan utama :

The image shows a web browser window with the address bar displaying `localhost/kereta/dashboard`. The browser's navigation bar includes back, forward, and refresh buttons, along with icons for bookmarks, extensions, and the user profile. The page has a light blue header with navigation links: **Bus**, **Home**, and **Konfirmasi Pembayaran**.

The main content area has a light gray background. On the left, it features a large heading "Selamat Datang di Bus X" and a subtext "Anda dapat melakukan pemesanan tiket Bus online dengan mudah". On the right, there is a booking form with the following fields:

- Terminal Asal**: A dropdown menu with the placeholder text "--PILIH--".
- Terminal Tujuan**: A dropdown menu with the selected value "jogja".
- Tanggal Berangkat**: A date input field showing "dd/mm/yyyy" with a calendar icon.
- Jumlah Penumpang**: A dropdown menu with the placeholder text "--PILIH--".

Below these fields is a green button with the text "Pesan & cari kereta".

At the bottom of the image, a Windows taskbar is visible. It includes a search bar with the text "Type here to search", several application icons (Edge, File Explorer, Chrome, etc.), and a system tray showing the time "12:01" and date "06/10/2020".
